

Amendments To Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A method for managing electronic forms, said method including:

~~transmitting at least one~~ receiving, at a remote device, a plurality of host form forms having form fields from a host to ~~a remote device having a remote database;~~

compiling a subset of said plurality of host forms based upon a service type selection;

entering receiving form data into said form fields of said subset of said plurality of host forms to create ~~at least one~~ a plurality of remote form forms;

storing said form data in a remote database; and,

communicating with said host to transmit said at least one remote form data to said host, thereby causing said host to map mapping said form data fields to database record fields within a host database of said host; and, causing said host to synchronize synchronizing said host database with said remote database form data.

2. (currently amended) The method of claim 1, further including synchronizing at ~~least one~~ said plurality of host form forms with ~~at least one~~ said remote form database.

3. (currently amended) The method of claim 1, further including synchronizing a ~~at least one~~ host application with ~~at least one~~ a remote application.

4. (currently amended) The method of claim 1, wherein causing said host to map includes causing said host to map using mapping including pre-determined mapping rules.

5. (currently amended) The method of claim 1, wherein causing said host to synchronize includes causing said host to synchronize by synchronizing includes calculating hash values to determine if a data change exists.

6. (original) The method of claim 1, further including verifying credentials of a user of said remote device.

7. (new) The method of claim 1, wherein said compiling further includes arranging said subset of said plurality of host forms according to a predefined order .

8. (new) The method of claim 1, wherein said service type selection includes at least one of retirement account, investment account, line of credit, banking, and insurance.

9. (new) The method of claim 1, further including converting free-hand text entry of said form data into text.

10. (new) The method of claim 1, further including replicating authentication data from said host to said remote device.

11. (new) The method of claim 1, further including replicating customer data from said host to said remote device.

12. (new) The method of claim 1, further including processing said data to verify at least one of spelling and format.

13. (new) A machine-readable medium having stored thereon a plurality of instructions, the plurality of instructions when executed by a processor, cause said processor to perform a method comprising the steps of:

receiving, at a remote device, a plurality of host forms having form fields from a host;
compiling a subset of said plurality of host forms based upon a service type selection;
receiving form data into said form fields of said subset of said plurality of host forms to create a plurality of remote forms;
storing said form data in a remote database; and,

communicating with said host to transmit said form data to said host, thereby causing said host to map said form data to database record fields within a host database and, causing said host to synchronize said host database with said form data.
